Lia DiValentin

Product Design Leader | AI Commerce, Search & Discovery
New York, NY | ladivalent@gmail.com | linkedin.com/in/liadivalentin | liadivalentin.vercel.app | liadivalentin.com

SUMMARY

Product design leader with 10+ years shaping commerce, marketplace, and enterprise experiences at global scale. I turn ambiguous opportunities into clear product direction, connect strategy to crafted end-to-end interaction, and build reusable systems that help teams move faster. My recent work spans agentic shopping, AI-assisted search, personalization, marketplace infrastructure, and complex B2B workflows.

EXPERIENCE

Staff Product Designer, eBay
June 2024 – March 2026

Led product direction and interaction design across AI shopping, search, discovery, personalization, and the systems connecting those experiences.

- Led end-to-end UX for eBay's AI Shopping Agent, a conversational experience that turns broad intent into guided product discovery and shipped as a controlled U.S. production pilot.
- Redesigned the Search Results Page ecosystem—including zero state, autocomplete, filters, item cards, ads, and top-of-funnel discovery—to support AI-first browsing while preserving familiar marketplace behavior.
- Named inventor on Immersive Item Cards, a flip-card interaction that reveals AI-curated signals inside high-density product grids without permanently increasing interface density (U.S. application 19/002,651; publication US 2026/0187710 A1).
- Established experience principles for AI-assisted commerce, including how the product communicates uncertainty, handles failure, uses progressive disclosure, and returns control when a recommendation misses.
- Created an end-to-end conceptual framework connecting buyer and seller journeys, with a personalization task dashboard that turns behavior and feedback into more useful recommendations.
- Built a 200+ variant component-logic matrix and introduced AI-assisted research and prototyping workflows that improved consistency between design intent and implementation.
- Mentored designers and aligned Product, Engineering, Data Science, and Research leaders around roadmaps, tradeoffs, and reusable interaction patterns.

Senior Product Designer, Walmart
June 2022 – April 2024

Led 0-to-1 design for Supplier One, a unified platform for suppliers to onboard, set up items, manage inventory, and process orders.

- Consolidated a landscape of more than 100 supplier-facing tools into a unified experience and helped take Supplier One from concept through its February 2024 U.S. launch.
- Reduced average supplier onboarding from 48 days to 5 days, measured from application start through approval; the first launch successfully onboarded 500+ high-revenue suppliers and achieved the 30% invited-supplier conversion goal.
- Reduced the combined measure of support tickets and call-center contacts by 20% after launch.

- The unified platform contributed to an approximately 30% reduction in logistics costs and approximately 4× ROI during the first six months after launch.
- Built an internal design subsystem and reusable component library, then taught the team to use Figma adoption data to demonstrate value and identify opportunities for cross-team collaboration.
- Applied mixed-methods research, usability testing, and A/B experimentation to simplify high-volume supplier workflows; mentored designers and led cross-functional design-thinking workshops.

Senior User Experience Designer, The Home Depot
October 2018 – June 2022

Owned complex Pro account-management and onboarding experiences spanning roles, permissions, groups, migration, and enterprise workflows.

- Owned end-to-end UX for Home Depot Pro's account ecosystem, including roles, permissions, groups, and enterprise workflows on a platform serving more than 2 million professional customers.
- Defined UX strategy and onboarding flows that supported the migration of more than 1 million acquired customers—including large contractors, small contractors, and individual businesses—into the new login and account platform.
- Identified a schema and address-model risk early enough to avoid approximately six weeks of engineering rearchitecture; the roughly $1 million impact is an internal estimate based on the avoided effort.
- Created living pre-read decks that helped Product, Engineering, and leadership understand design changes before meetings, increasing the time available for decisions and implementation planning.
- Ran usability studies, A/B tests, surveys, and behavioral analysis across account and order-management flows.
- Led the internal accessibility guild, producing standards and operating guidance that embedded WCAG 2.1 AA practices into decentralized agile teams.

EARLIER EXPERIENCE

Lead UX Designer, Texas Association of School Boards
2017 – 2018

Directed the research and information-architecture strategy for TASB.org, created an organization-wide design system, and integrated third-party service experiences. Established WCAG 2.1 AA standards for new digital work and earned an NSPRA Publications and Digital Media Award of Excellence.

UX Designer, Bulldog Solutions
2016 – 2017

Designed responsive websites, landing pages, newsletters, and campaign experiences for clients including Box, Oracle, TD Ameritrade, Silicon Labs, and Frontier Communications.

UX Designer, SAIC, U.S. Army Public Affairs, Pentagon
2014 – 2016

Led UX for the Army.mil redesign and U.S. Army News iOS app, introduced research and design-thinking practices, and established the first open-source component library for Army digital properties. Awarded the Department of Defense Thomas Jefferson Award for the Army's flagship website; held a Secret security clearance in 2014.

EDUCATION

BFA, Graphic Design, George Mason University
GPA 3.8, Dean's List

Master's Certificate in UX Management, Nielsen Norman Group
100+ hours of training, 15 exams

IDEO U continuing education, IDEO U
AI x Design Thinking, Human-Centered Systems Thinking, Leading Complex Projects, Innovating with Data, Designing for Change, Insights for Innovation

AWARDS AND RECOGNITION

- Named inventor — Immersive Item Cards, U.S. application 19/002,651; publication US 2026/0187710 A1
- Department of Defense Thomas Jefferson Award — Army.mil
- NSPRA Publications and Digital Media Award of Excellence
- GMU School of Art Writing Across the Curriculum honorable mentions

SKILLS

Product and interaction: 0-to-1 product definition, End-to-end flow design, Interaction pattern invention, Coded and high-fidelity prototyping, Design systems

AI, search and commerce: Agentic and conversational commerce, AI-assisted search and discovery, Personalization, Marketplace systems, Trust, uncertainty and failure states

Research and strategy: Mixed-methods research, A/B testing, Usability testing, Behavioral analysis, Evidence-led product strategy, Progressive disclosure

Leadership: Executive storytelling, Cross-functional alignment, Mentorship and coaching, Roadmap influence, Accessibility governance, Systems thinking

Tools: Figma, Figma Make, Claude, ChatGPT, Google NotebookLM, VS Code, HTML/CSS/JavaScript, Adobe Creative Cloud, Miro, UserTesting.com
